

## Steps to smarter and more effective soil compactors

Geodynamik offers a range of 3 Systems for installation on any soil compactors.

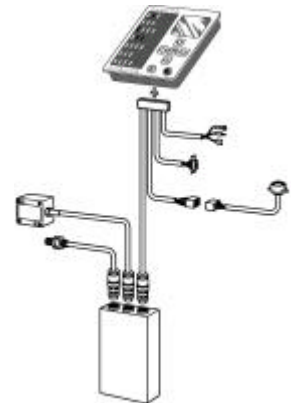

The **Compactometer™** (established original since 20 years) is the first step to a smarter and more effective soil compactor by indicating the bearing capacity.

The **Compaction Indicator™** presents a graphical view in green and red of each compacted section indicating where compaction is sufficient and where to compact more. The assured quality can be documented on paper.

**Option:** O'Neil microFlash2 Printer

The **CDS System™** presents a graphical view, on a display, of each compacted square meter. The acquired data can be transferred to a PC.

**Option:** Tally 7110 Printer
