

CdsComXL

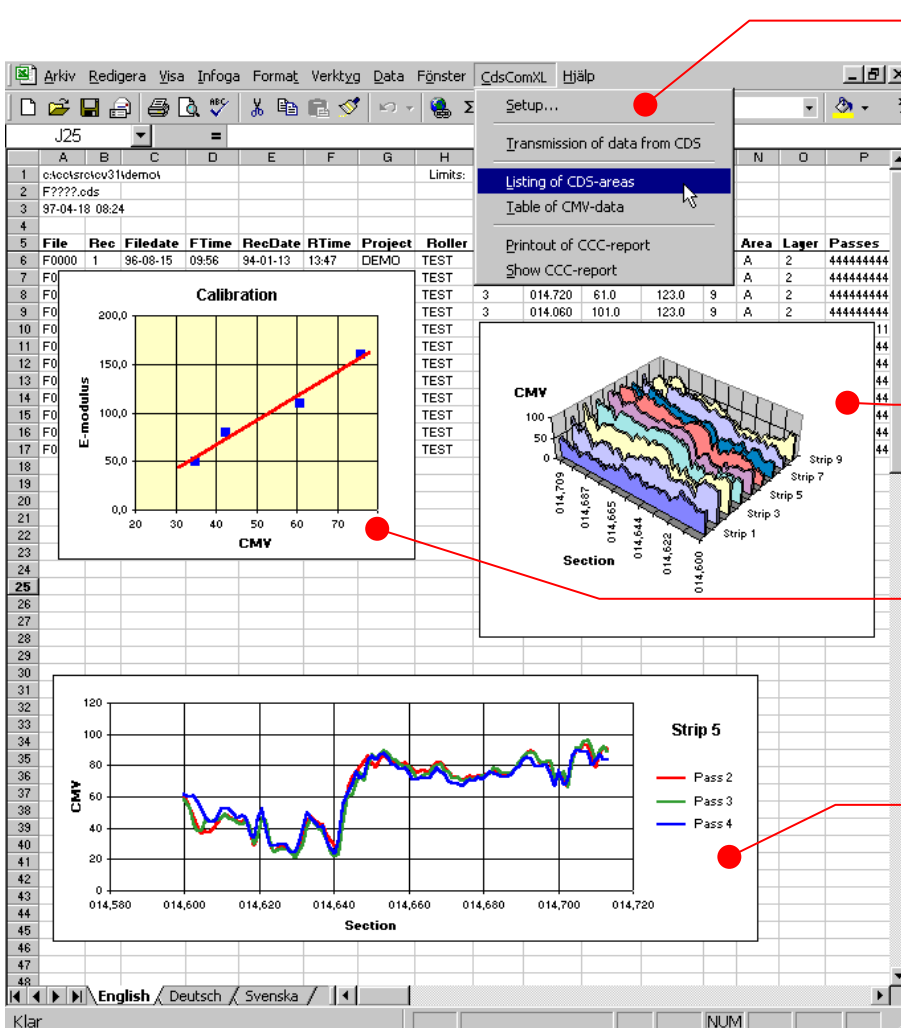

An Excel add-in for CDS-data

Present your CDS-data in the Windows Excel environment with the help of CdsComXL.

CdscomXL offers you a flexible handling of CDS-data. You have the possibility to determine your own way of presenting the results to the customer, the client or to the quality controlling manager.

The program is an Excel add-in and is available in two versions

- A 16-bits version for users of Excel 5 for windows 3.1
- A 32-bits version for users of Excel for Windows 95/98/NT.

CdsComXL creates a new menu in Excel that handles CDS-data in a flexible way.

You can transfer data from the CDS and create tables of saved files and CDS-data. You can make use of all the functions in Excel to create diagrams and present the results in your own way.

Summarize and present the results in illustrative 2D- and 3D-diagrams.

Create your own calibration diagrams with optional format.

Plot CMV-values chosen from particularly interesting parts of a compaction project. You can also create diagrams of the whole length of the object.
